

COMPREHENSIVE HEALTHCARE

AT HOME WITH PREDICTIVE AI MONITORING

People want comprehensive healthcare at home ...

96% of Canadians want to age gracefully, and longer, from home.

And they want to be home as soon as possible for post-illness and medical recovery ... **But**

24/7 monitoring and support can be expensive.

Who responds?

If an alert is triggered, our Care Team is notified. The response, based on the situation, may be a phone check-in, virtual visit, or in-person visit.

That's where CHAH AI

Care comes in, using AI-Powered monitoring

to detect, and even predict health issues before they become emergencies.

What does CHAH monitor?

Our in-home system tracks patterns in:

Sleep

Behaviour

Movement

Daily Routines

It turns our healthcare at home to be predictive and proactive, rather than reactive.

It gives You and Family the confidence to age or recover at home.
